INSTALL TIME

PROFESSIONAL: 20 MINUTES

NOVICE (DIY): 40 MINUTES

INSTALL NOTES:

- NO DRILLING REQUIRED
- LOWER EXHAUST
- FISHWIRE HARDWARE

INSTALLATION STEPS

- 1) Temporarily lower the muffler \ tail pipe by disconnecting the two (2) rear most hangers
- 2) Using the fish wire, place the 7/16 elbow bolts into the 1" holes in the frame. While the fish wire is still holding the bolt slide the spacer plate (#12) over the handle of the fish wire and through the 1" hole in the frame. Then pull the 7/16 bolts back through the spacer plate. (Spacer and bolt need to go in separately and be lined up while inside the frame rail.)
- 3) Being careful not to push the bolts back into the frame, carefully raise the hitch into position. Install the remaining 7/16 hardware as shown. Do NOT tighten at this time.
- 4) Insert 1/2 bolt through "separate" tow loop plate (#11), raise the hitch to the level position and slide bolt through the tow loop and the attached tow loop plate. Fasten into position with remaining 1/2" hardware.
- 5) In the reverse of these instructions, tighten all hardware to the following specifications and reattach muffler.
 - 7/16 = 50 ft-lbs
 - 1/2 = 75 ft-lbs

PERIODICALLY CHECK THIS RECEIVER HITCH TO ENSURE THAT ALL FASTENERS ARE TIGHT AND THAT ALL STRUCTURAL COMPONENTS ARE SOUND.
